

Nwabisile Online Shop

User Manual

This guide explains how to update your online shop using GitHub. You do not need to know programming — drag and drop your photos and edit one file.

Your live shop: <https://pbhaninaa.github.io/advert-store/>

Your products folder on GitHub: <https://github.com/pbhaninaa/advert-store/tree/main/my-products>

WhatsApp: 0738632244

Email: nwabisile.gugwana98@gmail.com

1. What you need

- A phone or computer with internet
- Access to your GitHub shop (login details from the person who set up the site)
- Product photos (.jpg or .png)
- Your updated products.json file (or edit it on GitHub)

2. Your products folder

All products live in ONE folder on GitHub called my-products:

```
my-products/  
  products.json    ← names, prices, sizes, colours  
  images/          ← drag your photos here
```

Open it here: <https://github.com/pbhaninaa/advert-store/tree/main/my-products>

3. Step 1 — Upload photos (drag and drop)

- Open my-products/images on GitHub
- Click Add file, then Upload files
- Drag and drop your photos into the upload area
- Click Commit changes at the bottom of the page
- Use simple names: red-dress.jpg or blue-jeans.png
- Recommended: square or tall photos, at least 500 × 500 pixels

4. Step 2 — Update products.json

Open my-products/products.json on GitHub and click the pencil icon (Edit).

Each product looks like this. Copy a block and change the details:

```
{  
  "id": 9,  
  "title": "Red Summer Dress",  
  "category": "Dresses",  
  "price": 350,  
  "image": "red-dress.jpg",  
  "description": "Cotton blend. Perfect for events.",  
  "sizes": ["S", "M", "L"],  
  "colors": ["Red", "Black"]  
}
```

Important rules when editing:

- Every product needs a unique id number (1, 2, 3 ...)
- The "image" name must match the photo filename exactly
- Put a comma after each product block, except the last one
- Keep quotation marks " exactly as shown

5. What each field means

Field	What to put
id	Unique number for each product — never repeat
title	Product name shown on the shop
category	e.g. Dresses, Tops, Bottoms — use the same spelling for filters
price	Numbers only (the shop shows R350)
image	Exact photo filename from the images folder
description	Short product info — sent in WhatsApp orders
sizes	Size options e.g. ["S", "M", "L"] — use [] if customer types their own
colors	Colour options e.g. ["Black", "White"] — use [] if customer types their own

6. Step 3 — Upload a whole folder at once

- Prepare a folder on your computer with products.json and an images folder inside
- On GitHub, open my-products
- Click Add file → Upload files
- Drag products.json and your photos into the upload area
- If asked to replace files, click OK
- Click Commit changes

7. Step 4 — Check the live website

- After Commit changes, wait 1–2 minutes
- Open <https://pbhaninaa.github.io/advert-store/> on your phone or computer
- Hard refresh if you do not see changes (pull down on phone, or Ctrl+F5 on computer)

GitHub rebuilds your shop automatically every time you commit.

8. Change or remove a product

- Change price or name — edit that product in products.json on GitHub
- Remove a product — delete its whole { ... } block from products.json
- Change photo — upload a new file to images/ or update "image" in JSON
- Always click Commit changes when finished

9. How your customers order

- Customer browses products and taps Add to Bag
- They choose size, colour, quantity, and optional notes
- In the bag they can edit size, colour, and notes for each item
- They tap Order via WhatsApp or Order via Email
- Size and colour must be filled in for every item before checkout works

- You receive a detailed message with product info, sizes, colours, and total price

10. If something goes wrong

Problem	What to do
Photo not showing	Check that "image" in products.json matches the filename exactly
Website did not update	Wait 2 minutes after Commit, then hard refresh the browser
Cannot edit on GitHub	Ask for login access to the advert-store repository
JSON error / shop will not load	Check for missing commas or quotation marks in products.json

11. Helpful tips

- Keep category names consistent (always "Dresses", not "Dress")
- Compress large photos (under 500 KB each) so the site loads fast on phones
- Share the shop link with customers — not the GitHub link
- Replace sample photos with your real product photos

12. Quick checklist

- Photos uploaded to my-products/images/ on GitHub
- products.json updated with correct names, prices, sizes, and colours
- Clicked Commit changes
- Checked live site on phone after 1–2 minutes
